

EMMERSON MOLANDE

IT Support & Electronic Security Engineer (Graduate)

emmermolande2@gmail.com | +263 78 019 0439 | Marondera, Zimbabwe | emmersonmolande.vercel.app

PROFESSIONAL PROFILE

Recent Information Systems graduate (2025) with hands-on experience in IT support, network administration, endpoint security, and systems deployment gained through two engineering internships in Zimbabwe. Adept at first-line technical support across hardware, software, and network issues, with working knowledge of Microsoft 365 administration, Windows environments, structured cabling, and firewall configuration. A disciplined self-starter comfortable contributing on live client environments, eager to develop cross-disciplinary range across both IT services and electronic security.

KEY ACHIEVEMENTS

- Configured and deployed managed switches, wireless access points, and extended structured cabling at Finealt Engineering — improving site-wide network coverage and reliability.
- Administered Microsoft 365 licence deployments and mailbox setups for end users at Jointed Hands Welfare Organization, ensuring seamless onboarding and access management.
- Built a full-stack Haulage Truck Management System (Django REST, PostgreSQL, Docker) as a client technical assessment — independently learning Docker and PostgreSQL under live project deadlines.
- Developed an AI-powered Student Support Chatbot (Rasa, Django, SerpAPI) with intent classification and real-time search integration — 2025 final year project.

EDUCATION

BSc Information Systems | Women's University in Africa | 2021 – 2025

Coursework: Networking fundamentals, systems administration, database management, software engineering, cybersecurity, and IT project management.

A-Level: 3 Passes | O-Level: 9 subjects including Mathematics, Science & English (2018)

RELEVANT EXPERIENCE

IT Support Intern | Jointed Hands Welfare Organization | 2024

- Provided first-line technical support for hardware, software, printing, and network issues across the organisation.
- Deployed and configured Microsoft 365 licence packages — user setup, mailbox activation, and access management.
- Performed preventive maintenance and system checks on workstations, printers, laptops, and peripheral hardware to ensure operational readiness.
- Monitored and maintained network and device functionality through structured troubleshooting and resolution of connectivity issues.
- Documented support cases and maintained accurate records of system changes and incident resolutions.

IT Intern | Finealt Engineering | 2023

- Expanded company network by planning and installing structured RJ45 cabling to new areas, deploying managed switches and wireless access points.

- Fabricated and terminated custom RJ45 cables with full signal integrity testing across all new connections.
- Diagnosed and resolved IP conflicts, DNS misconfigurations, and bandwidth bottlenecks in a live engineering environment.
- Installed and configured Windows and Linux operating systems with appropriate drivers and security hardening settings.
- Assisted senior engineers with infrastructure documentation, system configuration write-ups, and handover notes for client sites.

TECHNICAL PROJECTS

Haulage Truck Management System | Technical Assessment — Marytechenock Solutions | 2026

- Built a full-stack fleet management platform using Django REST Framework, PostgreSQL, and Docker containerisation.
- Designed a Bootstrap/Chart.js dashboard for real-time vehicle tracking and operational analytics.
- Independently learned Docker and PostgreSQL deployment under project deadline — no prior experience with either.

Student Support Chatbot | Final Year Project | 2025

- Built a conversational AI using Rasa with custom NLU models for intent classification and entity extraction.
- Developed a Django REST backend for webhook handling and integrated SerpAPI for real-time web search capability.

TECHNICAL SKILLS

Microsoft 365 — user provisioning, mailbox config & troubleshooting	First-line IT helpdesk: hardware, software & printing support
Windows 10/11 installation, configuration & OS-level support	Preventive maintenance on IT & integrated security equipment
Networking: TCP/IP, DNS, DHCP, VLANs, managed switches, Wi-Fi APs	Python, Django, JavaScript, HTML5/CSS3, REST APIs
Routers, switches & firewall configuration (Sophos & similar)	Linux administration & command-line proficiency
IP CCTV, access control & time-and-attendance systems	Git/GitHub, Docker, PostgreSQL, SQLite
Endpoint protection, antivirus management & patch deployment	Client documentation, SLA-aligned support & incident reporting
